1 A For the entire time we have been in business,
2 24 years.

3 Q How long have you dealt with the Arundel
4 Corporation?

5 A We have been spraying Arundel's roads I would
6 say no less than 7 years.

7 Q Has Black & Decker in the past been one of your
8 regular customers?

9 A They have been a client of ours for about ten
10 years.

11 Q Do you operate under a purchase order?

12 Yes, we have a purchase order with Black &
13 Decker.

14 Q What material does that purchase order specify?

15 A It specifically states we collect their waste
16 oils.

17 Q What had been your understanding as to what
18 their waste oils were?

19 A The process they showed me in the past they had
20 cutting oils, machine oils, lubricating oils, crank case
21 oils, everything.

Q. Have you ever analyzed it in your laboratory?
A. Tell us what capacity you have for analysis.

Q. We perform two tests. We have a centrifuge where we can spin the water out and we also have the distillation system where we can distill the water out.

Q. What analysis have you done on Black & Decker's waste in your laboratory?

A. Much, many, many times.

Q. What have been the findings?

A. It is notoriously a product that has in excess of 99 percent water. Generally it is as high as 99 percent.

Q. How is that waste usually handled?

A. Usually it is brought back to our facility at Rinaldo and put in one of the 30,000-gallon tanks, and we extract the oil off the tank and put it into our shipping tank.

Q. Where would the bottoms go?

A. The bottoms would eventually be sprayed on quarry roads, dirt roads.

Q. Would there be any occasion where Black &

1 • Decker's waste would go on to a road without going into
2 your tank?

3 A There have been some occasions when we put it
4 directly on a quarry road when we felt the quarry road
5 needed it.

Q Is that salary collected under a contract?

7 A No, it is not.

Q At the time you made your last pickup, did you have any information that would indicate to you that it was a manifest?

No, they always professed that the material was
dangerous.

Q What kinds of a truck we used to make that pickup?

1. We always use a vacuum type crush.

Q What is the driver's contact with the product
when he uses the vacuum truck?

A There are two 1,000-gallon tanks at the Black & Decker facility. Es opens a lid, drops a 3-inch hose into the tank which is six or seven feet below him and the vacuum pump pumps it. Es cover comes in contact with
